AGILEBLUE

Penetration Testing

Every penetration test uncovers risk. The question is what happens next. AgileBlue manages every engagement end-to-end, then turns every finding into prioritized remediation, strategic guidance, and measurable security improvements.

Why not just hire a pen test firm?

Most firms hand you a report and disappear. AgileBlue turns findings into action, integrated into your roadmap, remediation tracking, and tabletop exercises.

72%
who pen test regularly prevented a breach

How We Connect It

Plan — Advisory aligns scope to your highest risk →
Test — Partner runs a proven, multi-layered methodology →
Analyze — Findings reviewed across your full posture →
Remediate — We prioritize & track fixes to your profile →
Improve — Results feed your roadmap & tabletops

Penetration Testing

Find the gaps before attackers do.

Infrastructure Security
External, internal, PCI, wireless & remote-access pen testing.

Application Security
Web, mobile & thick-client apps, API testing & code review.

Device & IoT Security
Embedded, medical-device & IoT hardware testing.

Cloud Security
AWS, Azure & Google Cloud, highest avg vuln density (14.4/project).

Adversarial Emulation
Red & Purple Team, social engineering, threat emulation & hunting.

60% of breaches involve known, unpatched vulnerabilities

4 days for an attacker to move through a network after access

$10.2M average U.S. data-breach cost, an all-time high

Find your gaps before attackers do, **scope a test with our team.**
