AGILEBLUE

Cerulean XDR Agent

Endpoint Visibility Built for Autonomous Response

The Cerulean XDR Agent gives AgileBlue complete visibility into every endpoint, providing telemetry Sapphire AI needs to investigate threats, make confident decisions, and respond in real-time. Lightweight, always on, and deployed in minutes, it forms the foundation of autonomous endpoint protection.

What It Does

Complete Endpoint Visibility

Deep, real-time insight into every endpoint, detecting suspicious behavior before it escalates.

Lightning-Fast Response

Cerulean XDR identifies suspicious behavior and initiates approved containment actions in milliseconds, stopping verified threats before they can spread.

Built for Autonomous Security

Feeds Sapphire AI with rich endpoint telemetry, enabling automated investigation, decisioning, and response.

How Cerulean XDR Protects Endpoints

01

Lightweight, Always On

Deployed in minutes, runs silently in the background, no slowdown.

02

Behavioral Analytics

Continuous monitoring that catches what signature-based tools miss.

03

Autonomous Action

Rapid response with no manual intervention, across cloud and on-prem.

Why Cerulean XDR Agent

- Signature-based tools cannot detect every suspicious behavior.
- Laptops, servers and remote devices give attackers more places to gain a foothold.
- Every minute between detection and containment gives a threat time to spread.

24/7 U.S.-based SOC monitoring

10K+ Endpoints deployed and protected

Seconds To deploy, with zero user disruption

Stop threats before they move beyond the first endpoint.

Deploy continuous endpoint visibility and autonomous response in minutes, backed by AgileBlue's 24/7 U.S.-based SOC.
